

# Stops Corrosion in Your Fuel Tank

## Seals Tanks Against Fuels Containing Ethanol

*A leaking petrol tank can be lethal, wedding a tank is suicidal.*

*The POR-15 Fuel Tank Repair Kit restores your tank to "as good as new"*

**Kits From  
£38.50**

### BEFORE

This fuel tank had a small pin hole leaks on the end near the seam

### STEP 1

Mix 1 quart **Cleaner Degreaser** with 1 quart of hot water. This solution will be used to remove any gum, varnish or sludge from the inside of the tank.

### STEP 2

Pour the entire bottle of Metal Prep to dissolve rust, coat the tank with zinc phosphate and etch the metal for better adhesion of the sealer.

### STEP 3

After the tank is clean, drain the tank and rinse thoroughly with water. Let the tank dry. When totally dry, pour in the entire can of **Fuel Tank Sealer**.

### STEP 4

After all surfaces have been coated, drain the tank for about an hour to remove any excess sealer from the tank.

### STEP 5

Once repaired, use a fuel preservative & stabilizer to keep your entire fuel system in proper working order to avoid 'stale gas' problems in the future.

**Fuel Preservative and Stabilizer (S232 Frost 250ml) = £ 7.20**
